

QA LEAD

We are looking for...

A Telecommunication Engineer (preferably), Electronic Engineer or Computer Science with knowledge of wireless communications. As a Lead QA engineer, you will lead the vision for test automation strategy. You will be responsible for enabling and engaging the engineering teams, defining the test process, and continuously improving to create efficiencies. You will work with stakeholders across scrum teams and supervise a team of test engineers.

The ideal candidate will be a forward-thinking problem solver who is ready to own the role, the team, and engineering quality going forward.

Requirements...

- 4+ years of experience.
- Experience working as part of an Agile/scrum development team.
- Creative problem-solving abilities.
- Track record of learning and embracing new technologies, techniques, and processes.
- Demonstrated leadership through a complicated product delivery challenge.
- Strong communication (both written and verbal) skills and the ability to present complex ideas.
- Test automation experience.
- Good written and spoken English.

Valuable:

- Knowledge or education of wireless communication systems, especially 802.11 protocol.
-
